

Markdown to PDF Converter

A portable, self-contained script that converts Markdown files to beautifully formatted PDFs with no headers or footers.

Features

-  **Image support** - automatically converts SVG icons to PNG when available
-  **Portable** - works from any project directory
-  **Print-optimized** - responsive layout that looks great in PDF format
-  **Page breaks** - supports manual page break comments (`<!-- PAGE-BREAK -->`)
-  **PDF-only content** - special tags for content that only appears in PDF

Quick Start

```
# Convert README.md in current directory
./md-to-pdf.sh

# Convert a specific markdown file
./md-to-pdf.sh myfile.md
```

Installation

Option 1: Manual Copy

1. Copy the entire `md-to-pdf` folder to your project root
2. Run from your project directory:

```
./md-to-pdf/md-to-pdf.sh
```

Option 2: Using Install Script

1. From within the `md-to-pdf` directory:

```
./install.sh /path/to/your/project
```

2. The script will copy everything needed and make it executable

Dependencies

The script automatically handles dependencies:

- **Pandoc** - Auto-installed via Homebrew on macOS
- **Google Chrome or Chromium** - Used for PDF generation

Manual Installation

macOS:

```
brew install pandoc
# Chrome: Download from https://www.google.com/chrome/
```

Linux:

```
# Ubuntu/Debian
sudo apt-get install pandoc google-chrome-stable

# CentOS/RHEL
sudo yum install pandoc google-chrome-stable
```

Advanced Features

Manual Page Breaks

Add page breaks in your Markdown:

```
## Section 1

Content here...

<!-- PAGE-BREAK -->

## Section 2

Content on new page...
```

PDF-Only Content

Include content that only appears in the PDF:

```
<!-- PDF-ONLY-START -->
```

This content will only appear in the PDF, not in web/GitHub rendering.

- Perfect for print-specific instructions
 - Copyright notices for printed versions
- ```
<!-- PDF-ONLY-END -->
```

## Image Processing

- **SVG Support:** Automatically converts to PNG when available
- **Icon Processing:** Complex HTML icons become simple colored squares
- **Responsive:** Images scale appropriately for print

## Styling Features

---

### Typography

- **Headers:** Purple H1 with underline, clean hierarchy for H2-H6
- **Body text:** Inter font family with optimized line spacing
- **Code blocks:** Syntax highlighting with rounded corners
- **Tables:** Professional styling with alternating row colors

### Print Optimization

- **Page margins:** 0.5 inch on all sides
- **Font scaling:** Optimized sizes for print readability
- **Table formatting:** Fixed column widths for consistent layout

## Output

---

- Input: `README.md` → Output: `README.pdf`
- Input: `myfile.md` → Output: `myfile.pdf`
- PDFs are created in the same directory as the input file

# Troubleshooting

---

## Common Issues

### "Pandoc not found"

- Install manually: `brew install pandoc` (macOS) or use your package manager

### "Chrome not found"

- Install Google Chrome from <https://www.google.com/chrome/>
- Or install Chromium as alternative

### "PDF generation failed"

- Check that input Markdown file exists
- Ensure Chrome/Chromium is properly installed
- Check `/tmp/md_styled.html` for debugging

## Debug Mode

The script saves the intermediate HTML file at `/tmp/md_styled.html` for inspection if issues occur.

## Portability

---

This script is designed to be completely portable:

-  No Node.js dependencies
-  No project-specific configurations
-  Works from any directory
-  Self-contained styling and logic
-  Cross-platform (macOS, Linux)

Simply copy the `md-to-pdf` folder to any project and run the script.

## Files

---

- `md-to-pdf.sh` - Main conversion script
- `install.sh` - Installation helper for other projects
- `README.md` - This documentation

## License

---
